9. SOLAR KITS

It is our aim to find alternative sources of energy that are environmentally and economical friendly that will contribute and improve the quality of life in rural areas.

The solar solutions will always be developed at low cost to make the solutions affordable for the purpose served. Quite often the solar solutions are combined with clean water solutions.

9.1 Solar power supply kit

The Svizera Solar Supply system is a portable battery that can be charged by a small solar panel. With the 12V battery and USB connection the Solar Supply System can be used for many different purposes. For example a light during delivery of children, to run a microscope or to charge your mobile phone.

Even in cloudy days the small solar can provide enough energy to run more than one microscope.

9.2 Solar rechargeable lamp kit

The Solar Lamp Collection of Svizera Europe is designed for areas with no access to electricity and in particular for people who are still in need to use the toxic kerosene lanterns. By using a Solar Lamp you avoid indoor air pollution caused by kerosene lanterns.

The collection contains strong solar powered torches but also standing table lights in small and big sizes. When fully charged the Solar Lamp can provide more than 6 hours of light. But most important they are affordable, safe and clean.

10. CUSTOMIZE YOUR KIT

Making and developing kits is the specialty of Svizera Europe. We have a very broad range of kits and therefore the possibility to customize your own kit.

A kit consists of a range basic products. Each basic product has several versions. You can decide which version of the product you would like to have in your kit. In this manner you have the possibility to create a kit which perfectly meets the needs regardless religion, culture or circumstances.

With any religions or cultures there are different habits. The same applies to people who live in particular circumstances. This means that some products in a basic kit does not fit the needs of the requirement.

Through these small changes you can create a kit that fit the needs perfectly. Svizera Europe can advise, replace and make the kit as per request of the customer.

The number of products can change per demand, but also the nature of the product can be different each time. No kit can be perfectly designed for all situations. This is the reason why Svizera developed the concept:

'Customize Your Kit'.

Every situation needs a different approach with different products.

Are you looking for a specific product or kit?

In addition to all the kits mentioned in this product list, Svizera Europe BV can also supply a wide range of medical supplies and generic pharmaceuticals. As the list of products is extensive, we had decided not to list each separate product in our product list.

Please contact us for any requests including kits, essential medicines, medical consumables and equipment or chemicals. We will then go through the requirements and we will prepare a quotation accordingly.
